Authority Clarifications for Equipment Specifications Queries

Ref	Equipment Type	Section of Specification	Clarification Query	Authority Response
1	Headlamp Aim Tester	Connection to CoVIS Section	To clarify the requirement of bullet point 4 of this section stating; "The HAT must be capable of providing separate values for Dipped Beam, Main Beam / Auxiliary and Fog Lights for both left and right lights."	The bullet point in question states the results that you generate in an xml file to return to the ASA manager should create their respective fields and enter the value calculated in the test. This is shown in the xml sample supplied in the standard. The xml file must be created dynamically and it cannot generate fields for tests that were not carried out by the light tester. For example; If you only test the "low beam" (as happens in the majority of tests), then the xml file shall be tailored showing the "low beam" only. The high beam and / or fog light object remains, however there is no value fields present
